

ROSTISLAV GRISHIN

Edmonton, AB, Canada | 780-599-0885 | rost.grishin@gmail.com | [linkedin.com/in/rostislav-grishin](https://www.linkedin.com/in/rostislav-grishin)

PROFESSIONAL SUMMARY

Infrastructure & Network Specialist with 13+ years of experience in designing, deploying, and managing complex L2/L3 network environments across IT and OT systems. Proven track record of managing connectivity for 120+ distributed locations using cloud-managed ecosystems (Cisco Meraki). Expert in VLAN segmentation, VPN security, and infrastructure standardization. Dedicated to achieving 99.9% uptime and currently advancing toward CCNA certification.

CORE SKILLS

Networking:

VLAN, TCP/IP, STP, NAT, VPN (Site-to-Site, Client), IP addressing, subnetting, basic routing, DHCP, DNS, Unknown Unicast Flooding, STP, OSPF

Vendors & Platforms:

Cisco, Cisco Meraki, Ubiquiti, Aruba, Fortinet (basic), Cisco ASA, Microsoft Entra ID (Azure AD), Control4

Network Operations & Troubleshooting:

L1–L3 troubleshooting, VLAN segmentation, IP conflicts, DHCP/DNS issues, VPN connectivity

Tools:

Wireshark, Traceroute, Nmap (basic), Visio (network diagrams, As-Built documentation)

Infrastructure:

Rack design, structured cabling, cable management, power systems (UPS/PDU), Zero-Trust Principles

OT & Integration:

CCTV, Access Control, Control4, Dynalite, network segmentation for OT systems

PROFESSIONAL EXPERIENCE

Infrastructure Technician / Network Specialist

Unified Automation — Edmonton, AB | Oct 2025 – Apr 2026

- **Network Segmentation & Security:** Managed L2/L3 segmentation using VLANs to isolate OT, CCTV, and security systems, ensuring zero-trust communication.
- **Infrastructure Design:** Engineered and standardized server rack layouts across multiple sites, improving system maintainability.
- **Network Operations:** Diagnosed and resolved complex connectivity issues and VPN instability for a distributed network of 100+ locations.
- **Documentation:** Developed comprehensive "As-Built" technical documentation and network topology diagrams.

Systems Integration Technician

Signature Technology Integrations — Edmonton, AB | Apr 2025 – Oct 2025

- **Network Infrastructure Deployment:** Deployed enterprise-grade hardware (Switches, APs) for integrated CCTV and Access Control systems.
- **System Convergence:** Engineered the integration of security subsystems into the core network, resolving IP conflicts and DHCP lease issues.
- **L2/L3 Support:** Administered VLAN-segmented environments to enhance security across multi-tenant deployments.

Network & Automation Specialist

Top Audio — Herzlia, Israel | Jan 2022 – Oct 2024

- **Enterprise-Grade Network Deployment:** Architected and deployed robust network infrastructures for high-end residential and commercial projects, leveraging high-performance switches and access points to ensure 99.9% uptime.
- **Secure Remote Access & VPN:** Engineered and maintained secure Site-to-Site and Client-to-Site VPN tunnels, enabling encrypted remote management and troubleshooting for distributed automation systems.
- **IoT & OT Integration:** Led the technical integration of complex automation platforms (Control4, Dynalite) with core IP networks, resolving protocol conflicts and optimizing multicast traffic for real-time control.
- **Advanced Network Segmentation:** Implemented strategic logical separation (VLANs) between Smart Home, CCTV, and Control subsystems to enhance security and prioritize mission-critical traffic.

- Multi-System Troubleshooting: Conducted deep-packet analysis and systematic debugging across heterogeneous environments, identifying and resolving bottlenecks between network hardware and automation controllers.

Network Deployment Technician

O-me — Jerusalem, Israel | Nov 2019 – Jan 2022

- Cloud-Managed Network Deployment: Scaled and maintained a distributed network infrastructure across 120+ locations using the Cisco Meraki dashboard, ensuring centralized management and 98% configuration consistency.
- Standardization & Compliance: Developed and implemented standardized network templates for switches and access points, significantly reducing deployment time and minimizing configuration drift.
- Enterprise Connectivity Support: Orchestrated the rollout of secure VLAN segmentation and SSID management to support diverse traffic types (Guest, Corporate, IoT) across multiple geographic sites.
- Remote Performance Optimization: Monitored and optimized network health via cloud analytics, proactively resolving latency and connectivity bottlenecks before they impacted business operations.
- Infrastructure Life-cycle Management: Managed the full-cycle deployment of network hardware, from physical rack integration to logical provisioning and final acceptance testing.

Systems Integration Technician

KAHANE — Netanya, Israel | Dec 2016 – Nov 2019

- Multi-Project Lifecycle Management: Successfully delivered 70+ large-scale system integration projects, overseeing the convergence of IP networks, AV, and automation infrastructure.
- Networked Systems Provisioning: Configured and deployed IP-based control interfaces and subsystems within complex integrated network environments, ensuring seamless cross-protocol communication.
- Communication Protocol Analysis: Mastered the integration and troubleshooting of IP and serial communication protocols (RS-232/485), bridging the gap between legacy hardware and modern network controllers.
- Systems Validation & QA: Performed rigorous end-to-end testing and network validation for every deployment, ensuring high reliability and meeting strict technical specifications.

EDUCATION

Master of Engineering in Telecommunications

Almaty University of Power Engineering and Telecommunications | 2010 – 2012

Bachelor of Engineering in Telecommunications

Almaty University of Power Engineering and Telecommunications | 2006 – 2010

CERTIFICATION & TRAINING

Cisco Certified Network Associate (CCNA) — In Progress (Expected 2026) Targeting core competencies in:

- Layer 2/3 Networking: VLANs, Trunking, Spanning Tree Protocol (STP), EtherChannel.
- IP Connectivity: OSPF, Static Routing, IPv4/IPv6 subnetting.
- IP Services: DHCP, DNS, NAT, and Unknown Unicast Flooding logic.
- Network Security & Troubleshooting: Port security, ACLs, and systematic diagnostic workflows.
